Education

Lakshmi Narain College of Technology and Science

2022 – 2026

B.Tech, Computer Science and Engineering (Cyber Security)

Bhopal, M.P.

All Saints Higher Secondary School

Graduated 2022

Higher Secondary Education – 84.4%

Khajuraho, M.P.

Experience

Wyreflow Technologies

Aug 2026 – Present

Technical Lead Intern – Backend

Hybrid

- Coordinated backend team through daily agenda-setting, task prioritization, and blocker resolution across a 24-module Node.js/Express/MongoDB codebase
- Led architectural review and code approval process, identifying and prioritizing production risks including missing payment webhook handling and absent rate limiting
- Owned API testing via Swagger and drove integration alignment with the frontend team across shared release milestones
- Translated product requirements into scoped backend deliverables, authoring a phased technical roadmap sequencing infrastructure hardening and feature development

Projects

AutoLingo | Dart, Flutter, Lingo.dev, pub.dev, Localization (i18n)

pub.dev/autolingo

- Published a Flutter package on pub.dev that automates multilingual support using Lingo.dev
- Built runtime/build-time UI text detection and translation, removing the need for ARB files and localization keys
- Reduced localization setup overhead for Flutter developers building global-ready apps

Self-Improving AI Pipeline | Python, LangGraph, LLM Orchestration

ksploitx/Weave

- Built a multi-agent Generative AI pipeline using LangGraph and Large Language Models (LLMs) with prompt routing, token-budget optimization, and automated response evaluation.
- Implemented real-time SSE streaming of intermediate reasoning steps from backend to client
- Designed an evaluation framework for prompt engineering, response quality benchmarking, hallucination detection, and iterative prompt optimization.

Workbench | Next.js, TypeScript, PostgreSQL, Prisma, REST API, RBAC

ksploitx/workbench-rbac

- Built a full-stack RBAC admin panel leveraging the Next.js App Router for the frontend and a type-safe REST API
- Engineered an RBAC system backed by PostgreSQL and Prisma, using many-to-many junction tables to efficiently resolve union-based permissions across multiple roles
- Ensured data integrity by implementing Prisma's automated cascading deletes for orphaned references and application-level safeguards against system role deletion

Support Ticket Classifier | Python, scikit-learn, FastAPI, TF-IDF, NLP

ksploitx/support-ticket-classifier

- Built an end-to-end Machine Learning pipeline for automated ticket classification including preprocessing, TF-IDF feature engineering, model training, evaluation, confidence scoring, and deployment through FastAPI.
- Designed confidence-based routing with an optional LLM fallback for ambiguous cases and Containerized backend services using Docker for reproducible AI deployments.

Achievements & Research

AMD SlingShot Finalist | Autism Care Ecosystem (ACE Mobile)

ACE Post

- Ranked in the top 10 out of 40,000+ participants nationally for ACE Mobile, a Flutter app with on-device ML
- Developed Computer Vision solutions using TensorFlow Lite and Google ML Kit for image classification, facial emotion recognition, eye-contact tracking, and real-time inference on mobile devices.

SIH Grand Finalist | Interactive Tourist Kiosk System

Post

- Spearheaded the design and hardware integration of an interactive kiosk system for tourist assistance, built using Electron and React for a responsive, information-rich interface
- Engineered real-time content synchronization across distributed Raspberry Pi units using MQTT and REST APIs, ensuring consistent, low-latency updates network-wide

Technical Skills

Programming Languages: Python, JavaScript, TypeScript, PostgreSQL

Frameworks & Libraries: Node.js, React, Next.js, FastAPI, DRF, LangChain, LangGraph, Google ADK

Platform & DevTools: Git, Docker, Postman, Firebase, Supabase, GitHub Actions
